

# Malicious Activity Assessment

## Act Before Impact

**A BREACH IS ON THE HORIZON. KNOW YOUR RISK.**

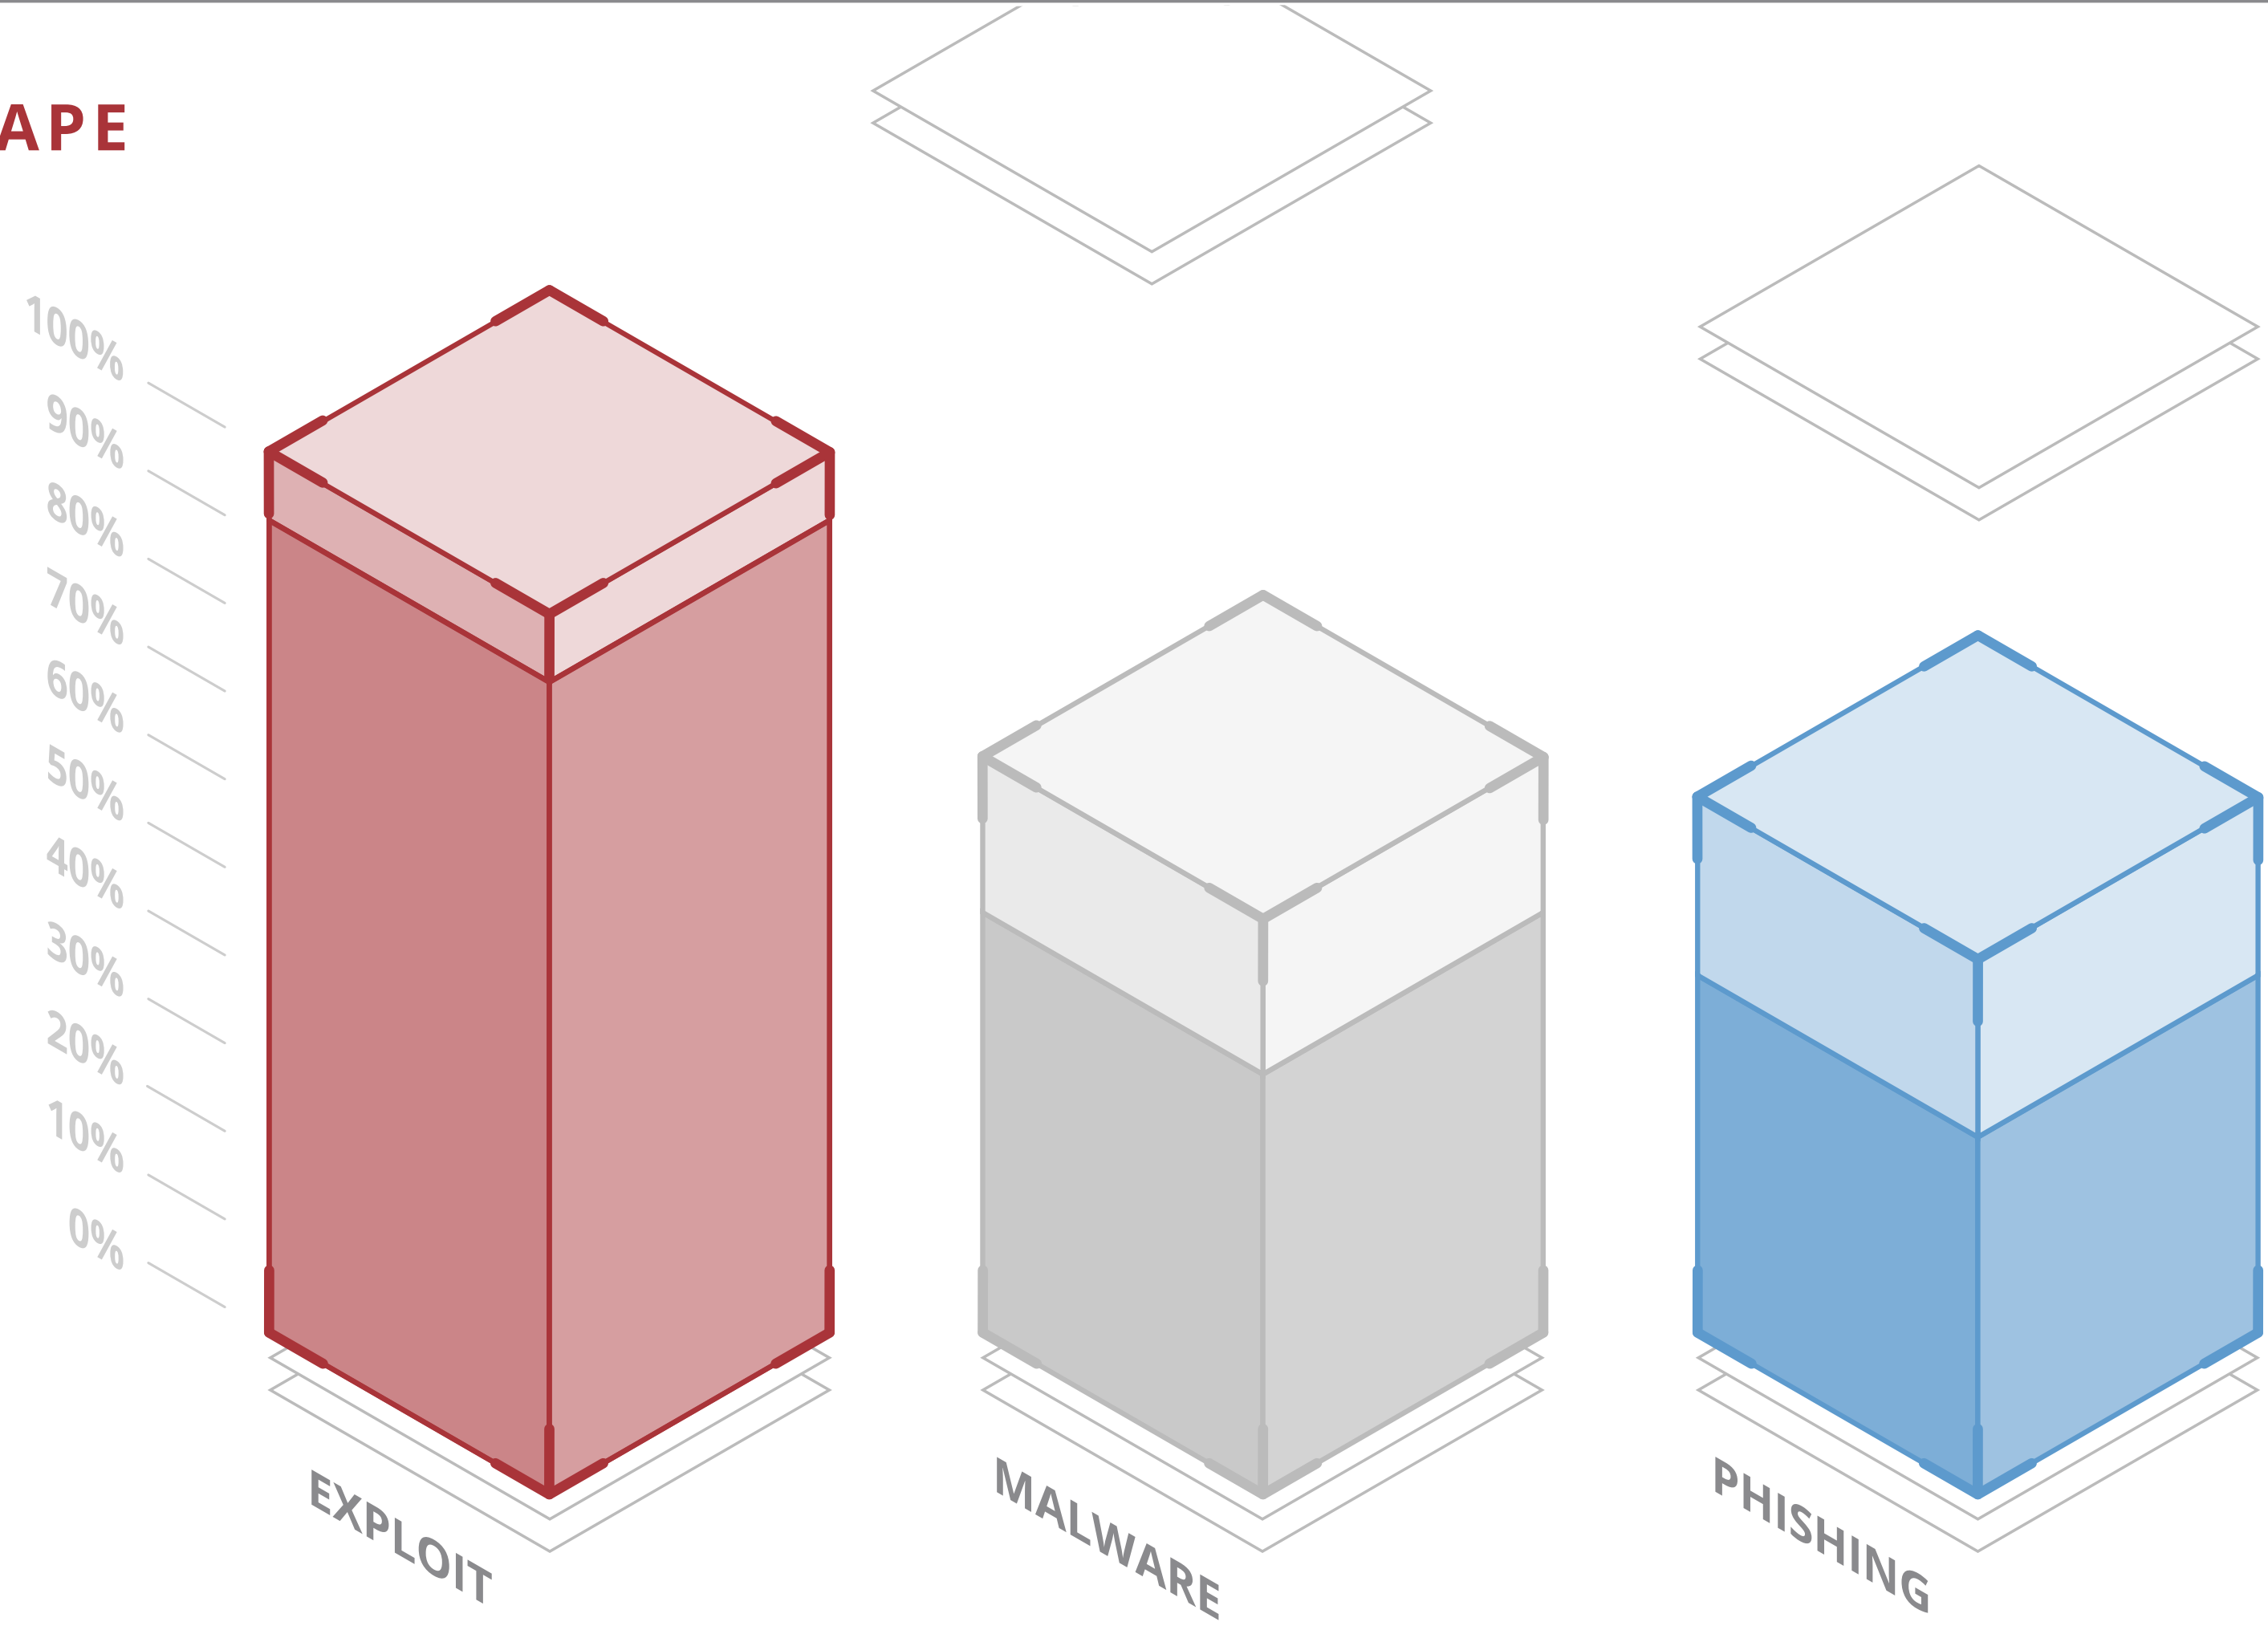

### TODAY'S THREAT LANDSCAPE

**On a long enough timeline, attackers will find and exploit blind spots.**

Over a 6-month period, the cumulative probability of an organization having at least one vulnerability within the following categories is:

- **Exploit:** 93.9% - 97.5%
- **Malware:** 47.3% - 65.9%
- **Phishing:** 40.4% - 59.9%

Source: Data from eSentire Managed Detection and Response engagements representing global averages with 4 sensors. Span of percentages reflects error margin with a 99% degree of confidence.

### THE CHALLENGE

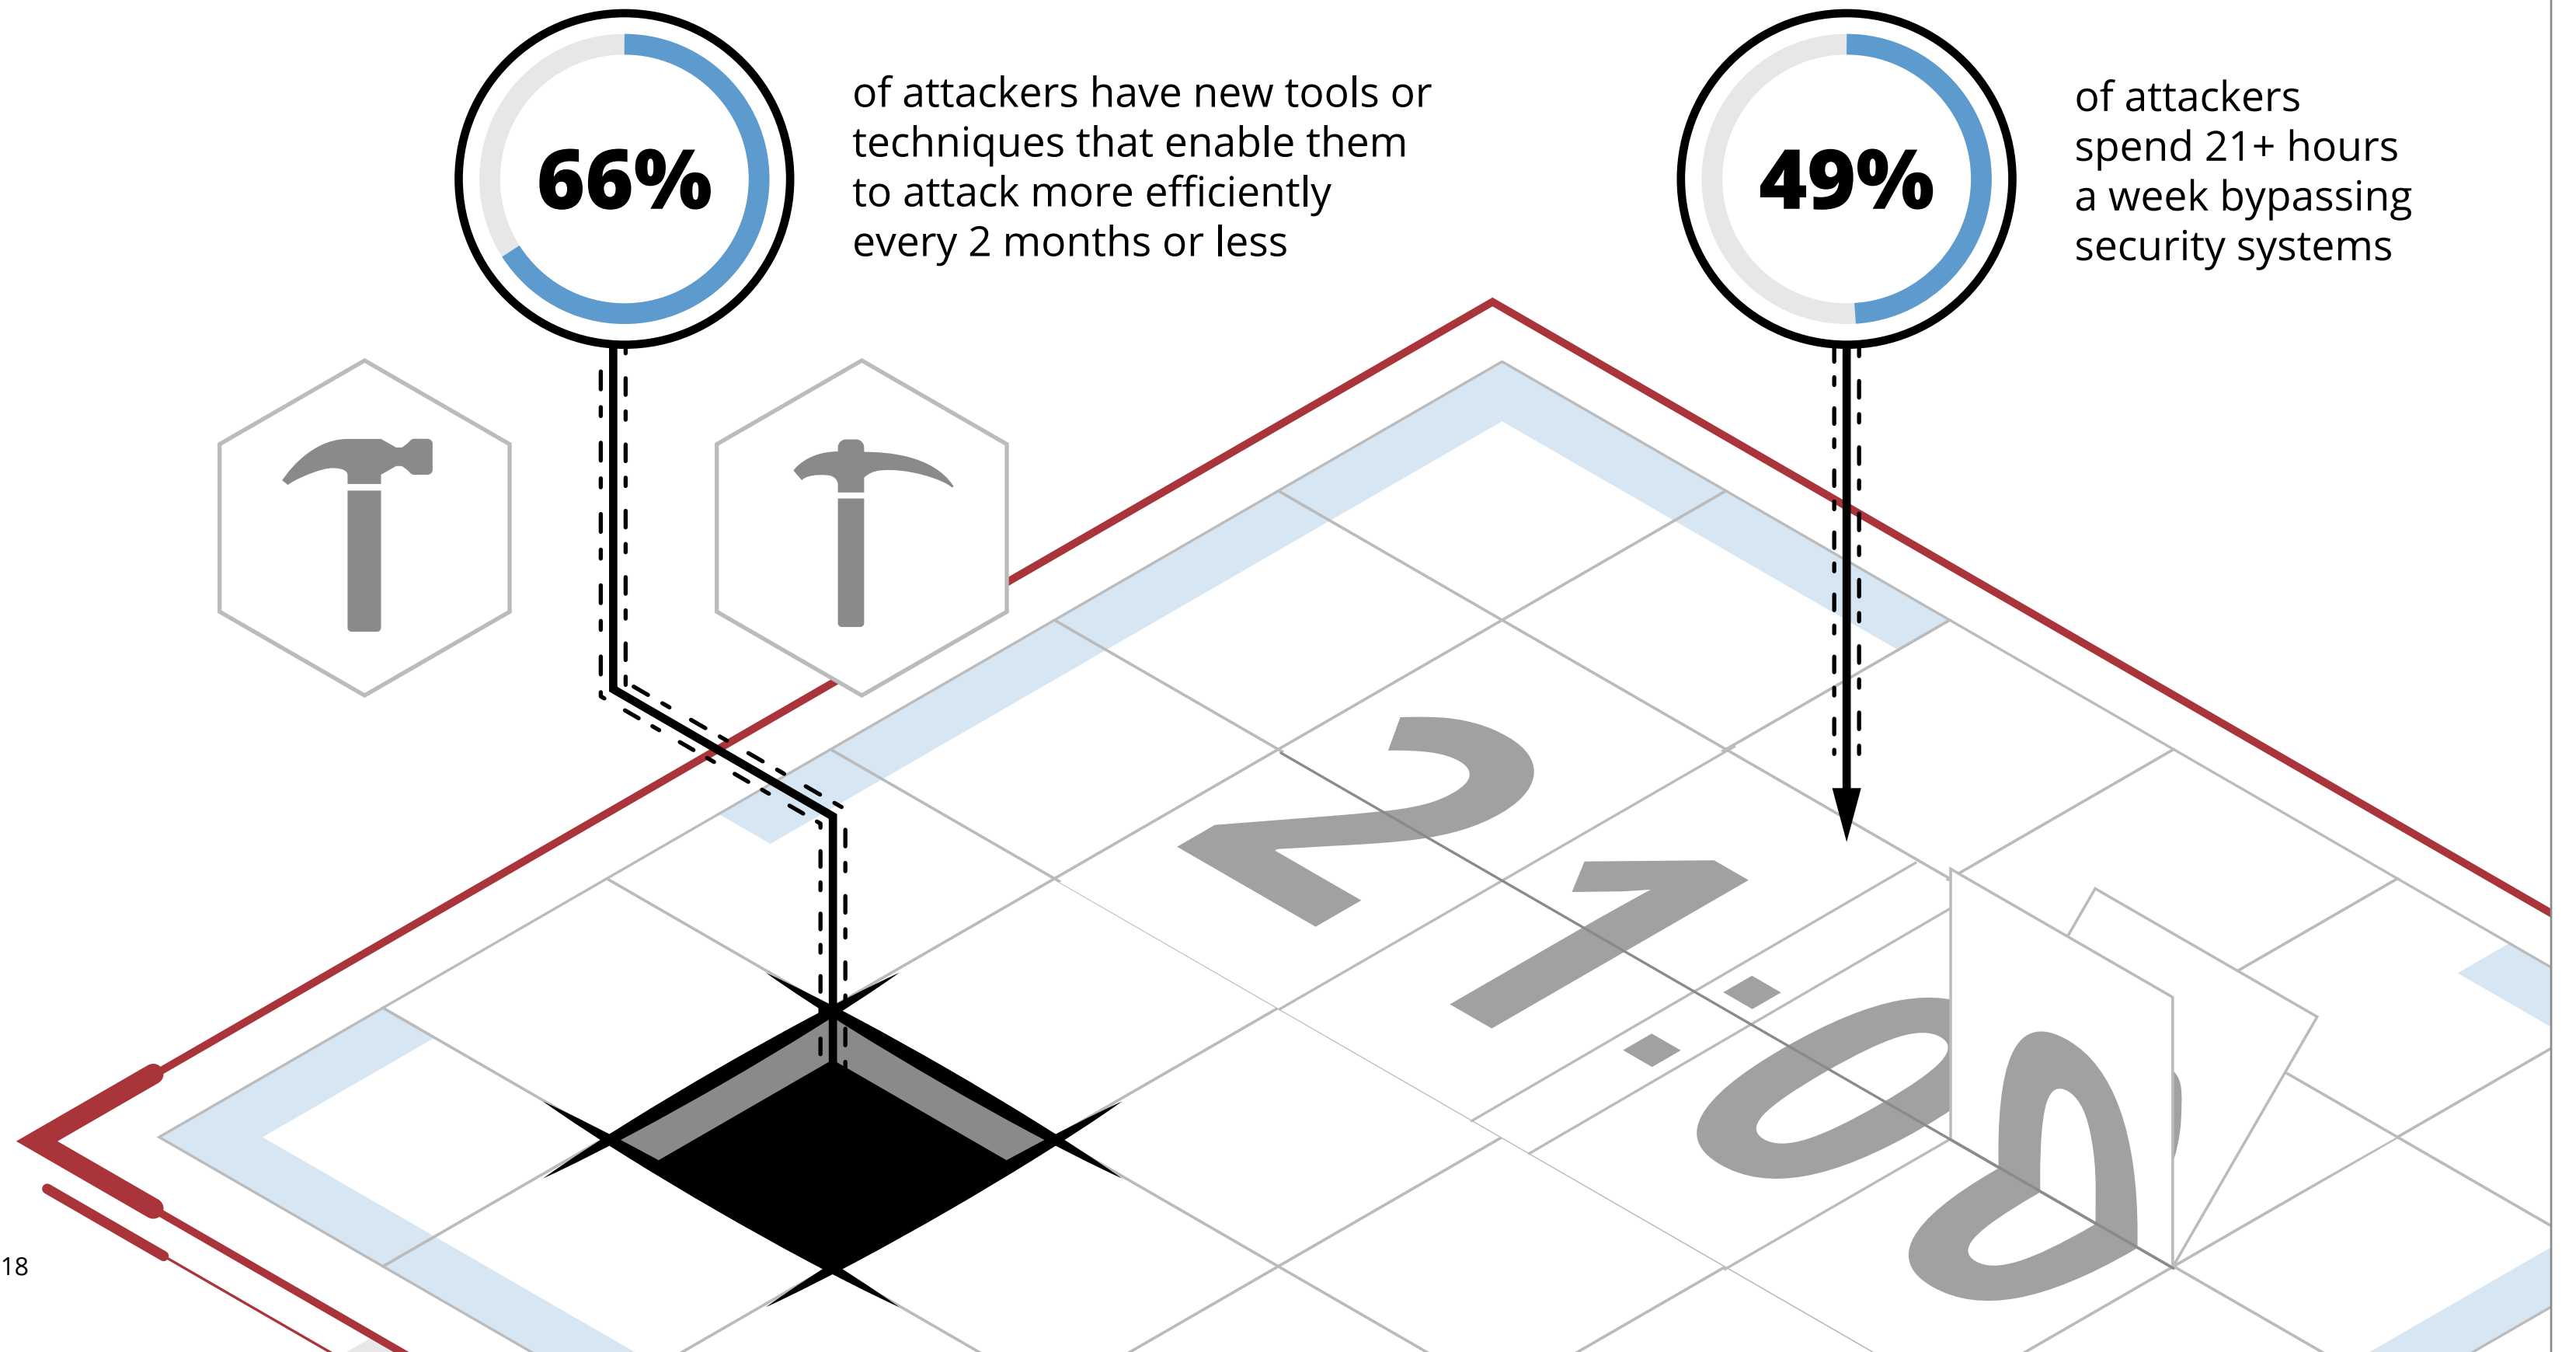

Faster than ever, attackers develop new techniques designed to bypass preventative measures. Organizations are struggling to keep up as the time to detect and respond increases across all industries.

**66%**

of attackers have new tools or techniques that enable them to attack more efficiently every 2 months or less

**49%**

of attackers spend 21+ hours a week bypassing security systems

### MOST ORGANIZATIONS DISCOVER BLIND SPOTS WHEN IT'S TOO LATE.

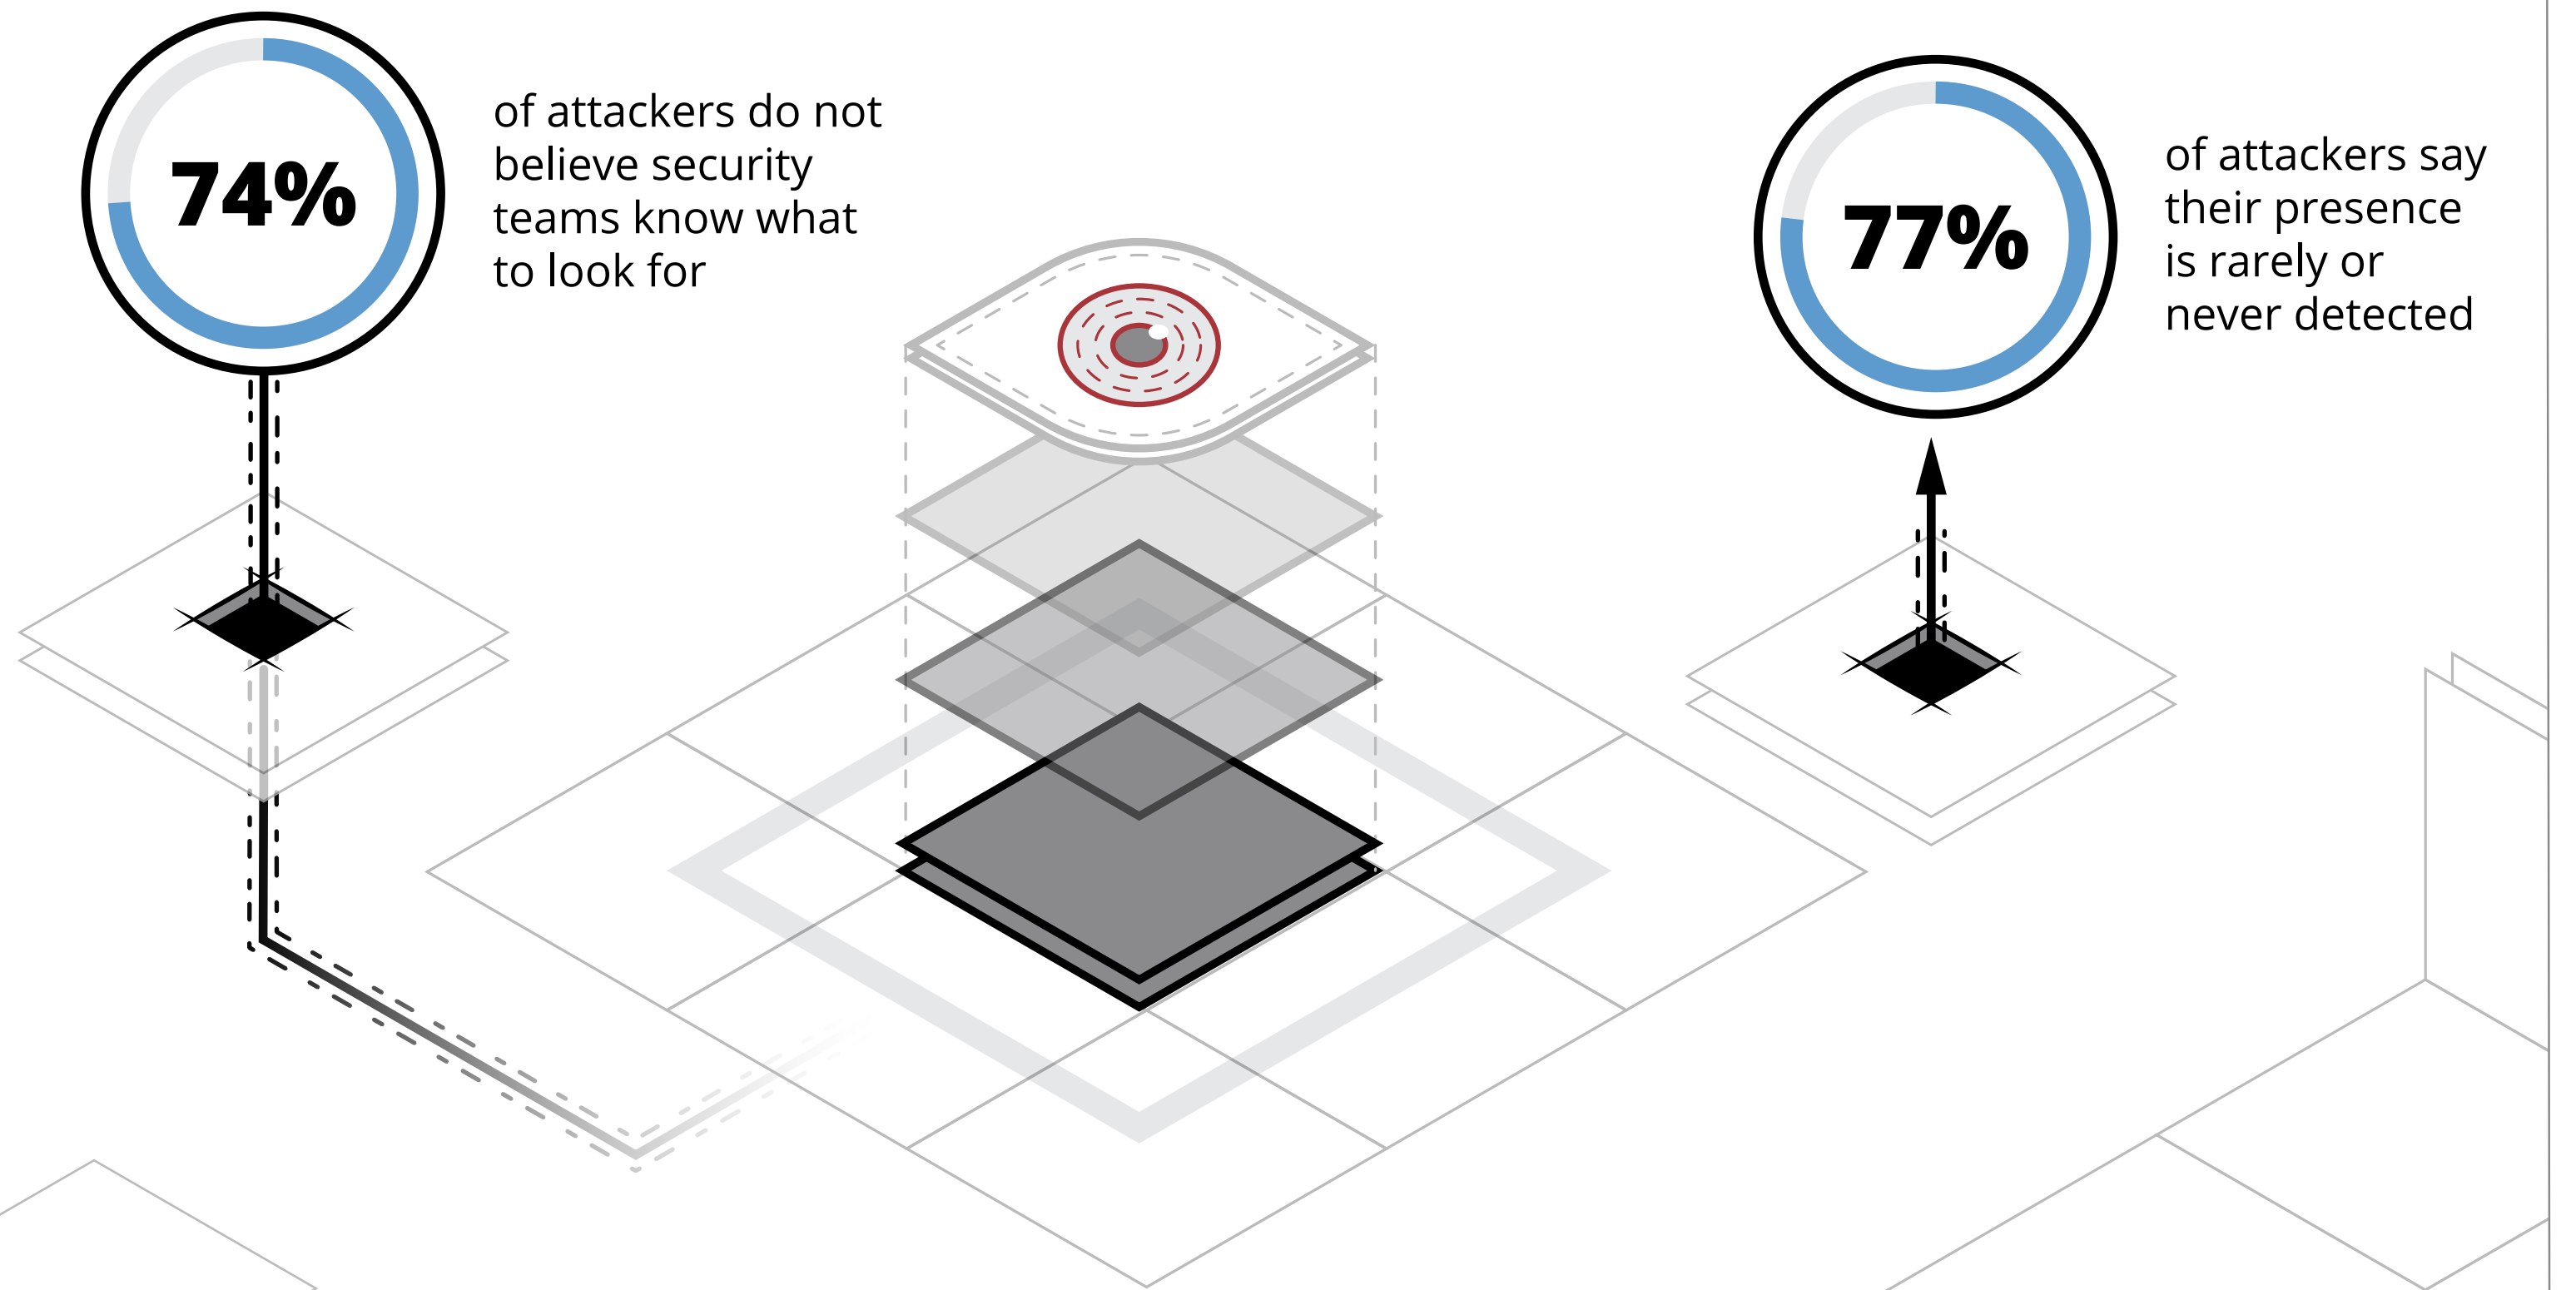

Overwhelmed and under-resourced security teams are unable to discover and eliminate blind spots leaving organizations operating at dangerous levels of risk.

**74%**

of attackers do not believe security teams know what to look for

**77%**

of attackers say their presence is rarely or never detected

**POINT-IN-TIME ASSESSMENTS ARE VALUABLE. BUT RISK MAY STILL BE PRESENT.**

### THE ANSWER

**Malicious Activity Assessment: Illuminate your blind spots. Discover if you've already breached.**

This in-depth 45-day assessment continuously monitors your network to illuminate potential blind spots. 24x7 Security Operations Center analysts look deep into network activity to hunt and contain known, unknown and evasive threats. Detailed summaries highlight defensive refinements that aid your security staff to mitigate areas of greatest risk and eradicate threats that may already be present.
