

SERVICE OVERVIEW

Advisory Services: Meet Your Virtual CISO

Today's threat landscape requires constant vigilance to watch your network traffic for signs of an attack or compromise. While at the same time, your information security program must leverage industry best practices so you can stay ahead of evolving compliance demands and regulatory obligations. Most mid-sized enterprises simply aren't equipped to manage mounting regulatory pressures and cybersecurity legislation.

Every Business is Unique

eSentire practices a simple, pragmatic approach to cybersecurity program development that focuses on 15 core areas impacting organizational cybersecurity readiness.

Our Advisory Services team will guide you through the creation, oversight and implementation of a formal cybersecurity program. Once the program is in place, Advisory Services continually assesses its maturity and success. The program is completely tailored to your organization's unique needs and measured against one (or multiple) industry best-practice frameworks as well as any regulatory requirements specific to your industry.

As the scope of regulatory requirements grows, it's critical that you continuously assess your posture, review the effectiveness of your controls and evaluate the efficacy of your programs. Advisory Services detects gaps in your approach and offers expert advice to address all of your security requirements.

Every Industry is Unique, Too

While we recognize the individual needs of your organization, we're also committed to working with the associations, regulators and standards groups driving your business. Our extensive portfolio includes (but is not limited to):

- Industry Standard Frameworks (ISO 27001, COBIT, NIST)
- Banking Security and Compliance (FFIEC, SOX, GLBA, FINRA, NFA, FTC, FCA, IIROC, OSFI)
- Insurance - NAIC
- Credit Unions (NCUA, OCC)
- Law Firms (ABA)
- Registered Investment Advisors (SEC/OCIE)
- Utilities and Manufacturing (NERC)
- Healthcare (HIPAA, HITECH)
- BioPharma (FDA)

Key Service Components

- Security Program Assessment
 - Security Maturity
 - Gap Analysis
- Incident Response Planning
- Policy Review and Creation
- Security Architecture Review
- Security Awareness Training
- Vendor Risk Management
- Vulnerability Management Program

Simplify Complex Compliance Requirements

At eSentire, we've redefined cybersecurity through an approach that leverages technology to mitigate known threats, and a combination of people, process and technology to intervene unknown threats. We call this approach, Managed Detection and Response™ service.

Advisory Services works with your organization to develop a comprehensive cybersecurity program based on our unparalleled cybersecurity experience, industry best practices and close alignment with regulatory and governing bodies. This ensures your organization meets or exceeds the rigorous standards and requirements of today's regulatory climate.

Advisory Services extends the front line work that eSentire delivers on a daily basis, helping clients develop comprehensive cybersecurity programs and protocols.

Additional Benefits

Award-winning Solutions

eSentire is a leader in cybersecurity and proudly boasts a client loyalty rate of 95%.

Trusted Expertise

eSentire is a leading managed information security provider to clients in the financial services, legal services, biopharma, extractive, healthcare, transportation and engineering industries worldwide.

Enterprise-wide Vision

Advisory Services helps you strategically manage threats and mature your cybersecurity program throughout the organization, starting in the boardroom.

Tailored Services

Advisory Services delivers a customized security program that addresses the specific concerns of your business including industry drivers, regulatory authorities and top threat actors and vectors.

Internal Governance

We practice what we preach. In addition to ongoing security training and regular testing, eSentire is SSAE 16 (SOC2) certified.
