Continuous Vulnerability Scanning

Reducing the Exploit Window Has Never Been More Critical

Most organizations aren't aware that 85% of cyber attacks could have been avoided if PC's alone were up-to date with current security patches. Vulnerabilities extend beyond desktops and devices to web applications, hardware and other business systems and infrastructure. Let's face it - staying on top of patches is difficult because your network, applications and systems are constantly changing and if you're like most mid-sized organizations, you simply don't have the resources to stay on top of it all. Continuous, active vulnerability monitoring has never been more critical to keeping you safe.

Powerful AND Simple Vulnerability Scanning

Continuous Vulnerability Scanning (CVS) by eSentire scans for vulnerabilities across your organizations vital infrastructure and assets. It provides critical notifications and reporting to help minimize your risk of breach and you won't be overwhelmed navigating through noisy alerts or complex dashboards. Our focus is to help you reduce the exploit window. Our elite cybersecurity analysts act as an extension of your team, laser focused on helping you reduce the exploit window. CVS delivers actionable reporting, advising and support to remediate critical vulnerabilities, keeping your organization safe.

Comprehensive world-class scanning

CVS uses the latest advanced threats and zero-day vulnerabilities. It supports more operating systems, network devices, tablets, phones, web servers, applications and other critical infrastructure to provide the industry's most comprehensive, continuous vulnerability detection.

Reports and insights that matter

CVS provides reporting on the critical vulnerabilities when they are discovered while also providing concise reports to fit the specific remediation cycles within your organization. Reports are created with your teams in mind. We focus on helping you remediate vulnerabilities which means you won't spend hours reading reports.

Fully managed by our elite cybersecurity analysts

Vulnerability management isn't easy with traditional approaches that place the burden of configuration, handling and resolution on your IT department. From triage and remediation support of critical vulnerabilities to periodic expert vulnerability briefings specific to your business, CVS makes it simple. Fully monitored, maintained, managed and delivered as a service, CVS helps you stay focused on your business.

Continuous Vulnerability Scanning is considered mission critical when it comes to protecting against today's cyber threats. Deployed across the globe, it helps:

Reduce the exploit window

Find and fix vulnerabilities quickly

Strengthen your organizations security posture

- Scans include coverage for 450+ devices and applications and over 55,000+ vulnerability checks
- Scans applications, systems, databases, client software, devices, infrastructure, Linux/Unix, Windows and Mac to ensure compliance with policies and standards

- Web application scanning including OWASP vulnerabilities
- Actionable notification and risk reporting for internal and external critical and exploitable vulnerabilities
- Vulnerability reviews with our expert team
- Always monitored by our cybersecurity experts
