

## eSentire Endpoint Managed Detection and Response™

### Endpoints are the Entry Point

Midsized organizations with stretched IT resources are faced with a growing list of challenges when it comes to managing security. Ever-increasing numbers of new endpoint devices and employee security gaps all afford rich opportunities for attackers to gain entry into your organization. Organized and well-funded cybercriminals are targeting your employees and their endpoints as a means to access your valuable data and assets, and easily by-pass traditional endpoint security.

**70%**  
of all breaches occur at the endpoint<sup>1</sup>

**52%**  
of incident responders have no visibility to the endpoint<sup>2</sup>

### Traditional Endpoint Security is Not Enough

Traditional antivirus and alternative technologies alone can't keep pace with evolving cyber threats, leaving you blind and vulnerable to sophisticated attacker behavior. While compromise may be inevitable, a data breach is not. Once inside the race is on to discover where adversaries are dwelling and contain it before potentially devastating damage occurs. Without visibility to the endpoint, you lose valuable time - when every second counts.

### eSentire Endpoint MDR™

Powered by Carbon Black™

- Detects, isolates and responds to threat attacks in real-time with its always-on, 24x7 service.
- Continuously records, centralizes and correlates all endpoint activity to detect attacks other miss, fast.
- Detect unknown attacks leveraging Attack Patterns and behavioral analytics, not simplistic signatures or IOCs.
- Instantly reveals root cause and scope, helping to prevent repeat attacks.
- Secures Mac, Linux and Windows devices for local and remote users.
- No load or impact to endpoints
- Arms your organization against the most sophisticated threats.
- Reduces time, effort and costs associated with incident response.

## Protect Your Endpoints. Stay Ahead of Advanced Attacks. 24x7.

### Maximize visibility

- Eliminate the endpoint blind spot to quickly detect and isolate advanced threats.
- Continuously record all endpoint activity, to aid in forensic investigations and incident response.
- Discover if endpoints have been compromised and dramatically decrease dwell time.

### Stay secure

- Gain 24x7 endpoint monitoring and response, delivered by eSentire's Security Operations Center.
- Secure your data using best of breed technology (powered by Carbon Black).
- Leverage our unsurpassed threat intelligence network and the expertise of our security analysts.

### Minimize costs and complexity

- Extend your security team with our virtual team of experts.
- Minimize data loss and potential impact to your business.
- Maximize efficiency and spend less time on costly incident response.
- Cloud implementation reduces complexity and adds zero hardware and maintenance costs.
